

Rishav Kumar

Full Stack Web Developer (MERN)

[LinkedIn](#) | [Portfolio](#) | [GitHub](#) | rishavkr000@gmail.com | +91 9608571248

SUMMARY

Full Stack developer with 2 years of experience building production SaaS features. Strong ownership of end-to-end systems: backend APIs, OAuth integrations (Azure AD), scheduling orchestration, and frontend Power BI embedding. Practical expertise in automated report exports, headless browser automation, and cloud deployment.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, SQL

Frontend: React.js, Next.js, Material-UI, Shadcn UI, Power BI JS SDK

Backend: Node.js, Express.js, REST APIs, JWT, OAuth 2.0 (Azure AD)

Databases: PostgreSQL, MongoDB, Redis

Cloud/DevOps: GCP (Cloud Run, Cloud Build, GCS), AWS S3, Docker, CI/CD, GitHub Actions

Automation & Tools: Puppeteer (headless), Power BI API, SendGrid, Outlook API, Postman, Git, VS Code, JMeter, PgAdmin, Jira

Other: Report Automation, Scheduling, Subscription Management, Observability

EXPERIENCE

Full-Stack Developer

Inflexion Analytics, Bangalore, IN

May 2023 – Apr 2025

- Designed and developed **PBI Flow**, a production-grade Power BI automation platform using (React.js, Node.js, PostgreSQL), enabling scheduled exports and delivery of **1000+ reports/month** as **PDF/PPT**.
- Implemented **Azure AD OAuth 2.0 (Authorization Code flow)** for Power BI integration, including secure storage of access and refresh tokens and automatic server-side token refresh for long-running background jobs.
- Built a **distributed scheduling and orchestration system** that evaluates active schedules and triggers scalable **background workers on Google Cloud Run** for parallel report execution.
- Developed an automated **Report Exporter** using **Puppeteer (headless browser)** to render Power BI reports, apply report-level filters and slicers via the **Power BI JavaScript SDK**, and export final visual states.
- Integrated cloud storage and email delivery pipelines by uploading exported reports to **Google Cloud Storage** and sending them via **Outlook and SendGrid APIs**, reducing manual distribution effort by **60%**.
- Enforced **subscription-based access control** by implementing backend middleware to restrict schedules, parallel exports, and unauthorized access.
- Improved reliability with retry logic, soft restarts for worker crashes, and centralized logging — reduced export failures and delivery errors by approximately **40%**.
- Owned end-to-end development by designing scalable backend APIs and integrating them with React-based frontend components, ensuring consistent data contracts and seamless Power BI report workflows.

PROJECT

AI Creator Platform

Sept 2025 - Nov 2025

Technologies: React, JavaScript, NextJs, Convex, Generative AI, Clerk Authentication

- Built a full-stack **AI-powered** content creation platform enabling users to **generate, edit, and publish SEO-ready** blogs using real-time **generative AI**.
- Integrated a custom rich-text editor with advanced formatting, **AI-based** content enhancement, and **image upload/optimization** using **ImageKit**.
- Developed creator **profiles, social interactions (likes, comments, follow system)**, and secure authentication flows using **Clerk** and **Convex** backend.

EDUCATION

Pondicherry University

Master of Science in Computer Science - 9.08 CGPA

Puducherry, IN

2020 – 2022

Nalanda College

Bachelor of Computer Application - 73.75%

Bihar, IN

2017 – 2020
