

Rishav Kumar

Full Stack Engineer · Node.js & React

[LinkedIn](#) | [Portfolio](#) | [GitHub](#) | rishavkr000@gmail.com | +91 9608571248 | Bangalore, IN

PROFILE

Full Stack Engineer with production ownership of end-to-end SaaS systems, backend APIs, cloud infrastructure, and React frontend. At Inflexion Analytics, built and scaled PBI Flow, a Power BI automation platform delivering **1,000+ reports/month** to enterprise clients via Azure AD OAuth 2.0, distributed GCP workers, and headless export pipelines. Actively seeking full-stack engineering roles in India.

SKILLS

Languages: JavaScript, TypeScript, SQL, HTML, CSS

Frontend: React.js, Next.js, Material-UI, Shadcn UI, Tailwind CSS, Power BI JS SDK

Backend: Node.js, Express.js, REST API Design, JWT, OAuth 2.0 (Azure AD), Convex

Databases: PostgreSQL, MongoDB, Redis

DevOps/Cloud: GCP (Cloud Run, Cloud Build, GCS), Docker, CI/CD, GitHub Actions, AWS S3, Vercel

Tools: Puppeteer, Power BI API, SendGrid, Outlook API, ImageKit, Postman, Git, JMeter

Soft Skills: Ownership, Time Management, Collaboration, Communication, Adaptability

EXPERIENCE

Full Stack Engineer

Inflexion Analytics, Bangalore, IN

May 2023 – April 2025

- Eliminated **80%** of manual reporting effort by engineering **PBI Flow** — a production Power BI automation platform handling scheduled exports, **Azure AD OAuth 2.0** token lifecycle, and subscription-based access control, delivering **1,000+ reports/month** reliably as PDF/PPT.
- Reduced manual distribution effort by **60%** by building cloud delivery pipelines (GCS, SendGrid, Outlook API) backed by a distributed scheduler on **GCP Cloud Run** for parallel, filter-accurate report execution.
- Improved platform reliability by **40%** via retry logic and worker crash recovery; accelerated report generation by **35%** through Puppeteer render engine optimisation; cut release cycles by **50%** with automated **CI/CD** via Google Cloud Build.

PROJECT

AI Creator Platform | *React, Next.js, Convex, Generative AI, Clerk Auth, ImageKit*

- Built a full-stack AI-powered content platform enabling users to generate, edit, and publish SEO-ready blogs via real-time generative AI, with a custom rich-text editor and AI-based content enhancement.
- Implemented creator profiles, social features (likes, comments, follow system), and secure multi-provider authentication using Clerk and Convex, demonstrating independent full-stack delivery during a self-directed career break.

E-Commerce Backend | *Node.js, MongoDB, REST APIs, JWT, Git*

- Designed and built modular backend services for an e-commerce platform covering JWT authentication, cart management, dynamic checkout logic, and subtotal calculation via secure REST API endpoints.

EDUCATION

Pondicherry University

Puducherry, IN

Master of Science in Computer Science – 9.08 CGPA

2020 – 2022

Nalanda College

Bihar, IN

Bachelor of Computer Application – 73.75%

2017 – 2020
